PROFESSIONAL SUMMARY

AI Engineering Intern and Computer Science Undergraduate building Software and Applied-AI production systems in Python, SQL, Flask, React, and REST APIs, including an LLM-gated automated paper-trading agent and a retrieval-augmented generation (RAG) document Q&A platform. Processed and validated 2M+ patient records through Python and SQL backend automation at Flex Data Pvt. Ltd., and solved 1,000+ data structures and algorithms problems across competitive programming platforms.

EDUCATION

CMR Institute of Technology | B.Tech in Computer Science Engineering

Sep 2023 - Jul 2027

CGPA: 8.14/10

Ships Junior College | Telangana State Board of Intermediate Education, MPC

Jun 2021 - May 2023

Marks: 986/1000

Saraswathi Vidya Nikethan High School | Secondary School Certificate

Mar 2021

CGPA: 10.0/10.0

TECHNICAL SKILLS

Programming Languages: Python, C++, Java (Basic), JavaScript, SQL

Full Stack: Node.js, FastAPI, REST APIs, React, HTML, CSS

AI/ML: Artificial Intelligence (AI), OpenCV, Machine Learning, TensorFlow, Large Language Models (LLM)

CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks

Databases & Developer Tools: MySQL, SQLite, Git, GitHub, VS Code, Docker (Basics)

EXPERIENCE

AI Engineering Intern | Flex Data Pvt. Ltd. (Remote)

Sep 2025 - Present

- Developed Python and SQL scripts for backend data processing and automation at Flex Data Pvt. Ltd., building reusable modules that validate, clean, and transform structured datasets into reliable inputs for downstream Software workflows.
- Wrote and tuned SQL queries to manage and filter 2M+ patient records for downstream AI/ML workflows.
- Debugged existing modules and optimized data-processing workflows to improve efficiency, eliminating a recurring production data-corruption defect by redesigning the state-write path with atomic writes and read-back verification.
- Owned end-to-end design and delivery of the Discord trade-signal bot for the team's AI stock-prediction and paper-trading system (detailed under Projects), from signal parsing to automated order execution.

PROJECTS

Stock Market Signal Automation & AI Trading Agent (Flex Data Pvt. Ltd.) | [GitHub](#) Python, Streamlit, Alpaca, REST API, SQLite

- Built a Streamlit app in which a historical context start date and a prediction origin date bound everything the model may see; the engine then forecasts a forward decision horizon, for example 30 days, using only pre-cutoff data and is scored against the real prices afterwards, making the reported accuracy honest through walk-forward validation.
- Owned the Discord bot end-to-end, parsing natural-language equity and options trade signals posted in a channel, such as "buy TSLA 250 call" and multi-leg strategies, into structured, validated orders, routing them through the same prediction engine for approval, and placing paper trades on the Alpaca REST API with automatic stop-loss and take-profit controls.
- Restricted execution to paper-trading accounts through a startup guard that refuses to run against a real-money account, backed by a durable, crash-recovering signal queue with idempotent processing and 1,000+ automated regression tests.

RAG Document Summarizer | AI Document Q&A Platform | [GitHub](#) | [Live Demo](#)

Python, Flask, React, TypeScript

- Built a Retrieval-Augmented Generation platform where a user uploads a PDF, Word, or text file and asks direct questions, receiving answers grounded in the document and cited back to the exact passage they came from.
- Engineered the Python and Flask backend to extract document text, split it into overlapping chunks, embed each chunk, and store the vectors in a persistent vector store for semantic similarity search and retrieval.
- Built the React, TypeScript, and Tailwind CSS frontend with token-streamed answers and click-through citations, with swappable providers so the platform can run fully local on Ollama, keeping confidential documents off hosted AI services.

ACHIEVEMENTS

- Secured Telangana State Rank 5 in Intermediate 1st Year and Rank 9 in Intermediate 2nd Year (986/1000 marks).
- Recognized among the top performers in the Smart Interviews training batch for two consecutive years.

COMPETITIVE PROGRAMMING

- Solved 1,000+ Data Structures and Algorithms problems across LeetCode, CodeChef, and Smart Interviews.
- LeetCode: 600+ problems solved, contest rating 1750+ | CodeChef: maximum rating 1600+ | Smart Interviews: ranked among the global top 600 and 2nd in college batch.

CERTIFICATIONS

- Salesforce Certified Agentforce Specialist, Agentblazer Legend | Salesforce (Dec 2025 - Jan 2026)
- Smart Coder (Data Structures and Algorithms) | Smart Interviews
- Advisory Launchpad Program | PwC AC India (Aug 2026)
- Networking Essentials, Network Technician Career Path | Cisco Networking Academy (Jan 2026)
